Milestone 2

The project features are coming along. The features I have currently working:

New member registration

Member login

Admin login

Member dashboard where members can make requests, see personal requests

Admin dashboard where admins can see all requests, see pending requests, see member directory

I still need to get the request editing for admins working. Easy enough on the back end, but I'm having trouble with Laravel's routing and views. For some reason it's just not working.

I also need to work on the front end. It works but it looks pretty plain and basic.
